SESSION 2

Cloud Essentials

ThoughtSpot Cloud Essentials is a training program for ThoughtSpot Cloud and ThoughtSpot Embrace customers. This class first focuses on two of the primary disciplines in implementing ThoughtSpot: Data Connectivity & Making Data Searchable. The full program is divided into three sessions: The first part of the course is devoted to connecting ThoughtSpot to your data warehouse using Embrace and will look into the many ways in which connected data can be prepared for searching by end users. This is followed by end user functionality training which includes hands-on experience with the basic and advanced search features of the platform.

Who Should Attend:

• ThoughtSpot Administrators & Implementers

• ThoughtSpot Implementation Partners

3 modules in 13 hours $149   Prerequisites:
None

This course covers the following modules:

• Data Expert Training (5 hours)

• ThoughtSpot End User Essentials (4 hours)

• ThoughtSpot Advanced End User (4 hours)

Module 1 - ThoughtSpot Data Expert Training (5 hours)

The Data Expert Training involves an end-to-end discussion on the process of connecting to your data and optimizing it for search in ThoughtSpot. It also introduces several relevant data modeling topics. Includes hands-on, interactive lecture allowing participants to experience setting up the data connection for themselves.

Module 2 - ThoughtSpot End User Essentials (4 hours)

End User Essentials is the foundation course designed to teach participants the core end user functionality of ThoughtSpot. Through hands-on lectures, students will master basic search, changing visualizations, saving answers, drilling, filtering, and using ThoughtSpot Mobile to analyze data from their mobile devices.

Module 3 - ThoughtSpot Advanced End User (4 hours)

Go beyond the basics of the end user features covered in the ThoughtSpot End User Essentials course to discover the advanced analytic capabilities of the platform. During this hands-on, interactive course you will dive deeper into Liveboard creation, formatting your results, and using SpotIQ to find answers to questions you didn't even know to ask of your data. Do more advanced searches using ThoughtSpot Keywords and create your own custom attributes and measures using formulas to take your analyses to the next level.

Participants must bring their own laptop to the session.
