Three Pillars of Insights Hours

Product Spotlight

How-to ThoughtSpot

Community Thread

- Hosted **last Thursday of every month** by ThoughtSpot's GTM team
- Register for **one or all sessions**
- Ask your questions using Q&A for the **Community thread** discussions

What you'll see today:

Feature Showcase: 26.10 & 26.11 Sneak Peek

Per-model cache in ThoughtSpot Cloud

Events & Activities Announcements

Open Q&A

Feature Showcase: 26.10/11

ThoughtSpot 26.10/11

Key Feature Highlights

Spotter Benchmark platform 26.11 EA, GA incoming
test answer latency and accuracy against sample queries and known-correct answers.

Search your Spotter chats 26.11 GA
find and resume chats easily from the sidebar or the top search bar.

Spotter 3 scheduling 26.11 GA
ask for scheduled updates directly in chat, such as “send me updates on this answer every Monday”.

Spotter on Liveboards 26.11 GA
open Spotter from a Liveboard grounded in tabs, visualisations, filters and time ranges. Multi-step tasks stay in context.

SpotterViz file upload 26.11 GA
upload a Tableau workbook (.twb, .twbx) or an image or PDF and have a Liveboard built from it.

Liveboard dependency management 26.11 GA
Stops data engineers from being blocked when removing columns relied on by Liveboards, clearly identifying dependencies.

Failure emails for scheduled jobs 26.11 GA
the schedule author is notified automatically upon job execution issues.

Snowflake Semantic View integration 26.11 EA
re-sync keeps your custom model configuration, and coverage extends to measures with dimension filters, hierarchies and parameterised queries.

Spotter Benchmark platform 26.11 EA, GA incoming

Measure how accurately Spotter answers your questions and track that accuracy and latency over time.

Why it matters:

- **Replaces manual spot checks** with a test they can rerun at any time
- **Catches regressions** after changes to the data model, coaching or instructions, or after a ThoughtSpot upgrade
- **Gives evidence** before Spotter rollout to business users

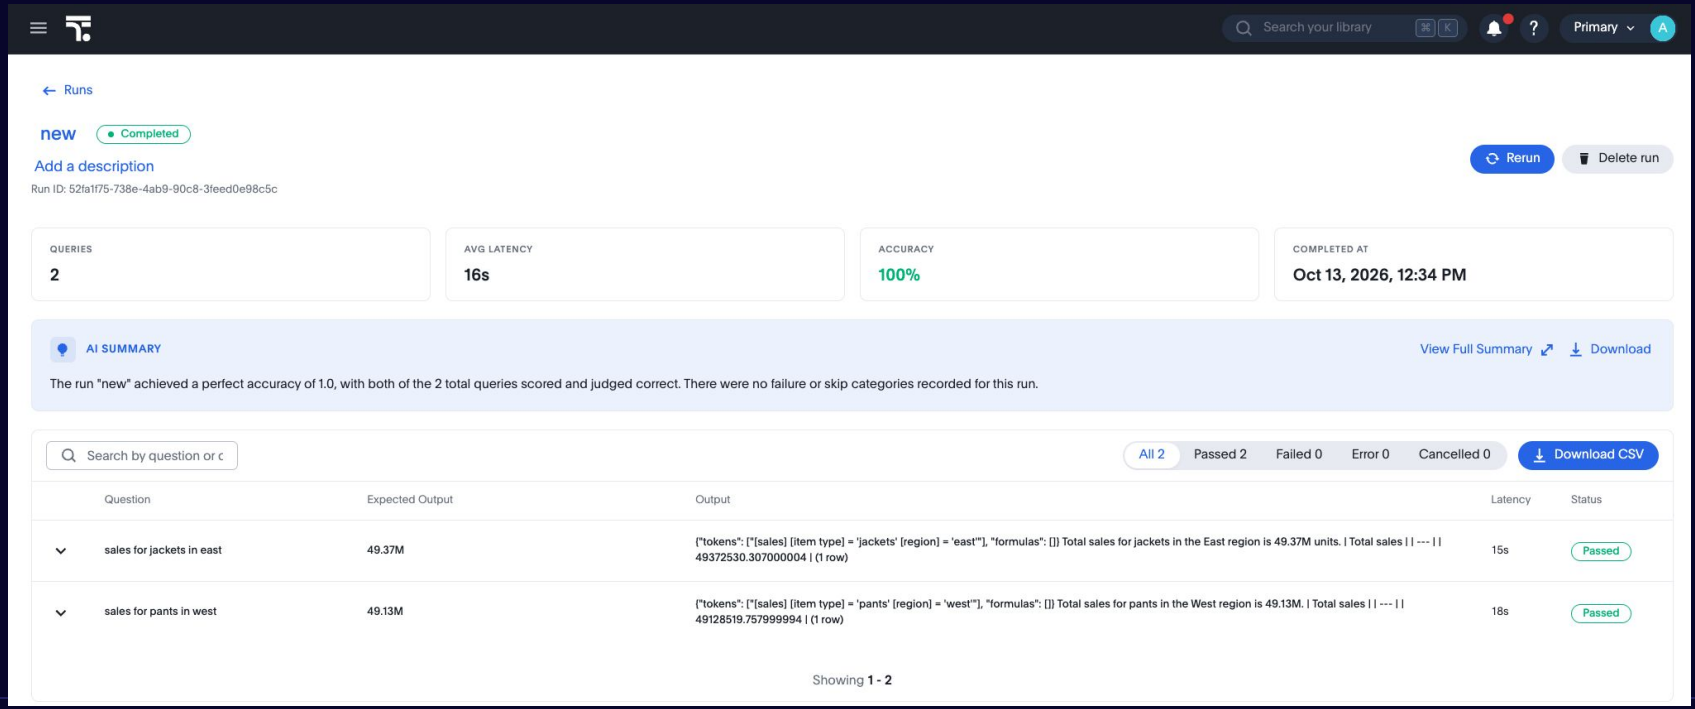

Who can access it:

Admins, and users with the *Can manage Spotter* privilege

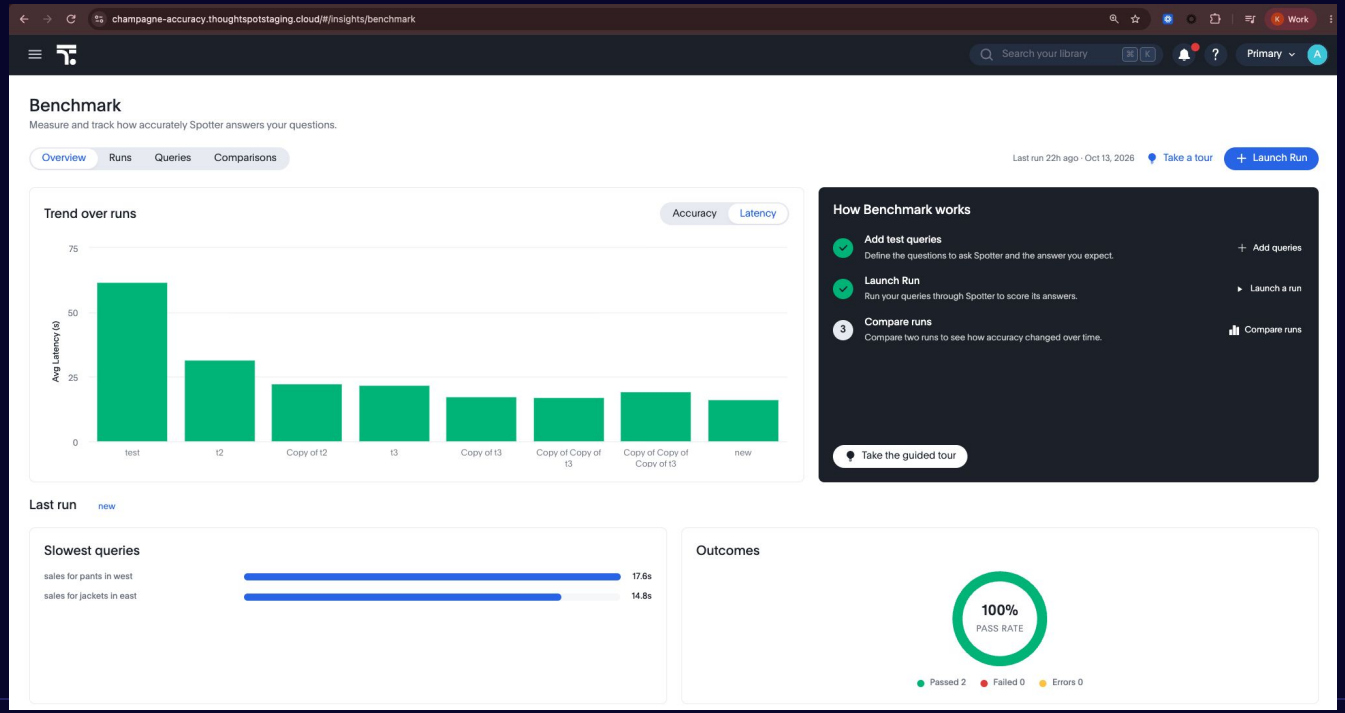

Where to find it:

Spotter → Settings → Benchmark

Spotter Benchmark platform 26.11 GA

Spotter Benchmark platform 26.11 GA

Liveboard Dependency Management 26.11 GA

Before:

Admins couldn't delete a column from a data model if there were any dependants downstream such as Liveboards.

Now:

- Admins can delete a column even when Liveboards depend on it
- Liveboard owners can repair their affected content in just a few clicks

How?

- Columns can only be deleted by admins and only via the V1 API
  `POST /dependency/delete-with-dependents`

Failure Emails for Scheduled Jobs 26.11 GA

ThoughtSpot now **automatically sends a failure notification email to the Liveboard schedule author** whenever a scheduled job fails, eliminating the need for the author to check the run history manually.

Snowflake Semantic View Integration 26.11 EA

Centralise your metrics and business logic management in Snowflake together with seamless self-service analytics experience in ThoughtSpot

What's new:

- ThoughtSpot now **preserves your custom model configuration when you re-sync** a SF Semantic View integration

- **Expanded Semantic View coverage** to include measures with dimension filters, hierarchies, and parameterized queries

Per-model cache in ThoughtSpot Cloud

GA (with Progressive Rollout) in 26.11

Per-model cache in ThoughtSpot Cloud

Scale your AI, not your warehouse bill

EVERY MONTH

1,000

Free query-hours

Compute and unlimited storage, included with ThoughtSpot.

WAREHOUSE IMPACT

30–60%

Lower warehouse spend

Ask often without hitting your CDW.

AI WITHOUT LIMITS

$0

No CDW cost Anxiety

Scale spotter usage without worrying about CDW cost

The double win: ask Spotter as much as you want. No warehouse cost spikes on the data side.

02 · SPEED

Fast answers for every user, at any load

Instant for everyone

Every user gets the same fast load, however many people are asking.

Always fresh

Scheduled refresh plus smart routing to live data. No stale answers, no manual switch-over.

Guaranteed compute

Up to 16 vCPU / 64 GB free, with a guaranteed floor. Speed no longer depends on your warehouse.

We cache your data, not just answers or results

	ThoughtSpot Data Cache	Answer-only caches
What's cached	Your full data model	Results of past queries
Served fast	Any question: new filters, drills, Spotter	Exact repeats only
Hits your warehouse	Only on scheduled refresh	Every new question

03 · SIMPLICITY

On in one click, nothing to operate

1

Pick a model

Any ThoughtSpot model, on the sources you already connect.

2

Turn on Data Cache

One click. No IT tickets, no ETL, no pipelines to build.

3

Intelligent Routing

Liveboards and Spotter route every query to the cache or live data automatically.

Fully native: Data Cache runs inside ThoughtSpot, so there's nothing extra to install, secure or monitor.

Events & Activities

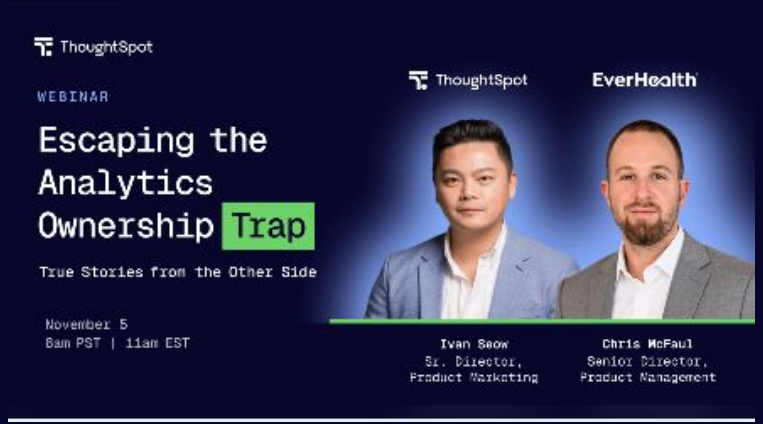

Upcoming Live webinar

Escaping the Analytics Ownership Trap

Today's AI tools make building analytics look easy. But before you know it, you're stuck owning the underlying infrastructure while your core roadmap takes a backseat.

On November 5th, join us for a candid conversation with product leaders about:

- The ownership trap: How they fell into it and the signs they wish they'd spotted sooner
- The turning point: Steps to turn analytics from a maintenance burden into a monetization opportunity
- The payoff: What escaping has done for their token management, customer experience, and more

AgentSpot in Action

(bi-weekly group demo on Thursday's at 9am PT)

Each week, we will build a real use case live and show how AgentSpot turns it into a working agentic workflow.
In this 30 minute session, you will see how to:

- Describe the work in plain language and turn it into a working agentic workflow
- Connect it to the tools and data your team already uses
- Add the business rules, approvals, and context it needs
- Run the workflow across systems and see what it changed
- Share what you build while keeping every action governed and secure

Who It's for: For anyone with a process to improve, a task to automate, or work to move forward. No technical background required, just curiosity about what AI can do when it actually takes action.

Semantic & Context Layer

Your Foundation for Trusted AI Analytics

An AI agent that's dead wrong will still sound completely sure of itself. This series shows you what it takes to get trusted, consistent answers out of agentic analytics.

Why attend?

- Design resilient, governance-first semantic and context layer strategies that deliver ROI and scale alongside your AI roadmap
- See real customer builds on Snowflake Semantic Views and dbt
- Cut AI token costs, not just AI risk, with your trusted context layer
- Learn how to build a semantic model in minutes to power your agentic analytics everywhere
- Get real-time answers to your questions from industry and product experts
