ThoughtSpot

Agentic Analytics Platform

Analyst Studio

Data Mashups, Data Science, Python Notebooks, Ad Hoc SQL Analysis,

AI Agents

Spotter - Agentic AI Analyst, Deep Research, Agent as a Service

Semantic Model

Trusted & Secure Metrics Layer, Agent-ready Metadata, Data Security

AI-Augmented Dashboards

AI-first, Mobile-ready, Automated Insights, Connected Where You Work

Data Management

Real time, Zero Copy or In-Memory, Unified Metadata and Compliance

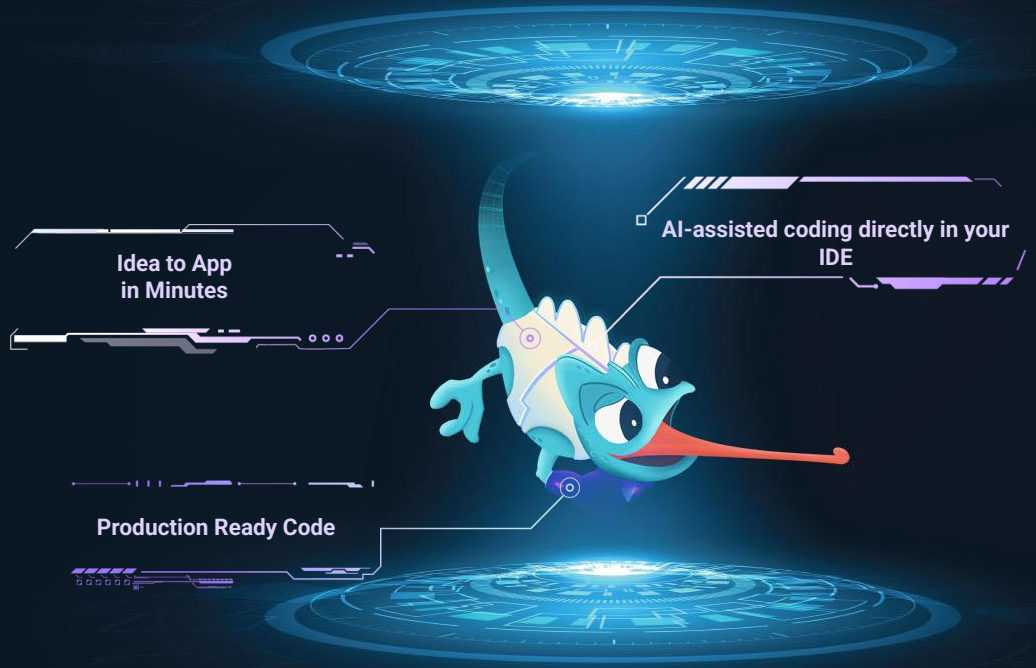
Intelligent Apps

Embedded Analytics for your customers, Insights to Actions, APIs and SDKs, Workflow Automation

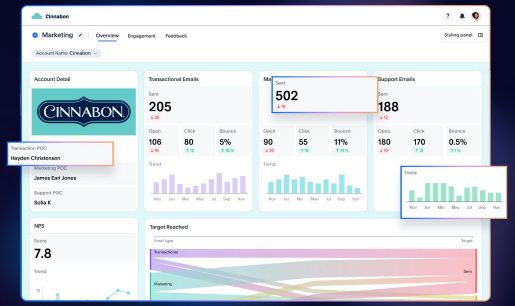
ThoughtSpot

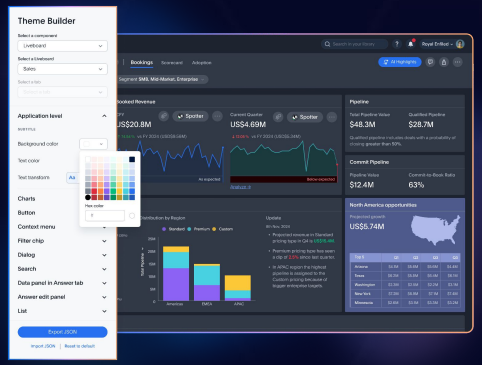
Agents

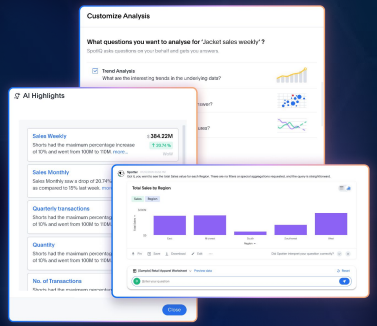
Less coding.
Faster Data Apps.



#1 Embeddable Analytics Platform







Built for end-users

Self-service analytics, zero training. Faster adoption, happier customers.

Fully customizable

White-label, theme, and integrate anywhere. Make it 100% yours.

AI-Powered by Default

Insights that find your users. SpotIQ, AI Highlights, Spotter— ready via SDK/API and MCP Server.

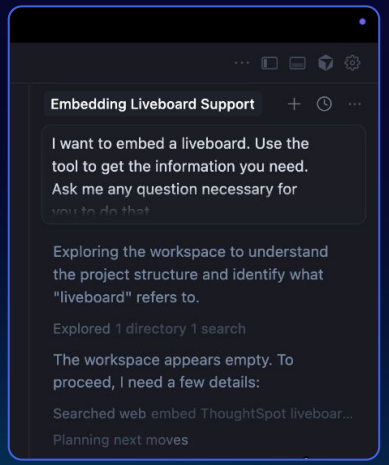
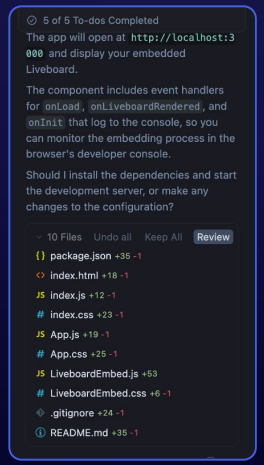
SpotterCode

Your AI coding partner for embedded intelligence





Deliver intelligent apps instantly

Accelerates development with AI-assisted coding directly inside your IDE.

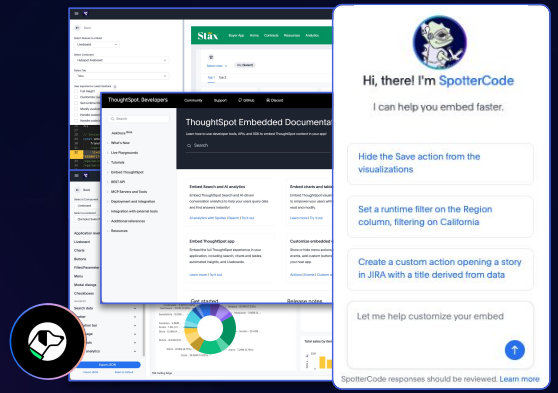
Adaptive code for your app

Understands your project context and structure to produce native, production-ready embeds.

Frictionless SDK and API integration

Removes the learning curve by guiding you through embedding and configuration patterns.

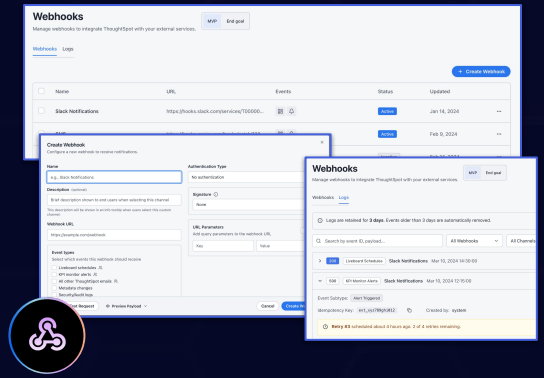
Scale & customize your embed with the power of AI



SpotterCode in the Dev Tab, and as a plugin

Get contextual help each step of the way in your development, in your ThoughtSpot cluster but also in your tool of choice (Replit, Lovable, etc.)

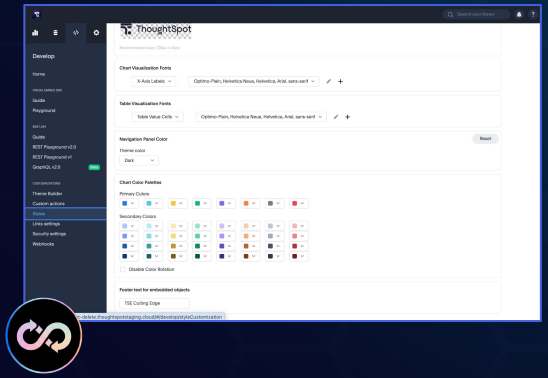
June 2026



Webhooks

Manage events in ThoughtSpot to create automations: white label emails, start a flow based on a KPI alert, etc.

June 2026



CICD improvements

Automate all developer settings via APIs and leverage SDKs to help with lifecycle management of ThoughtSpot objects via TML.

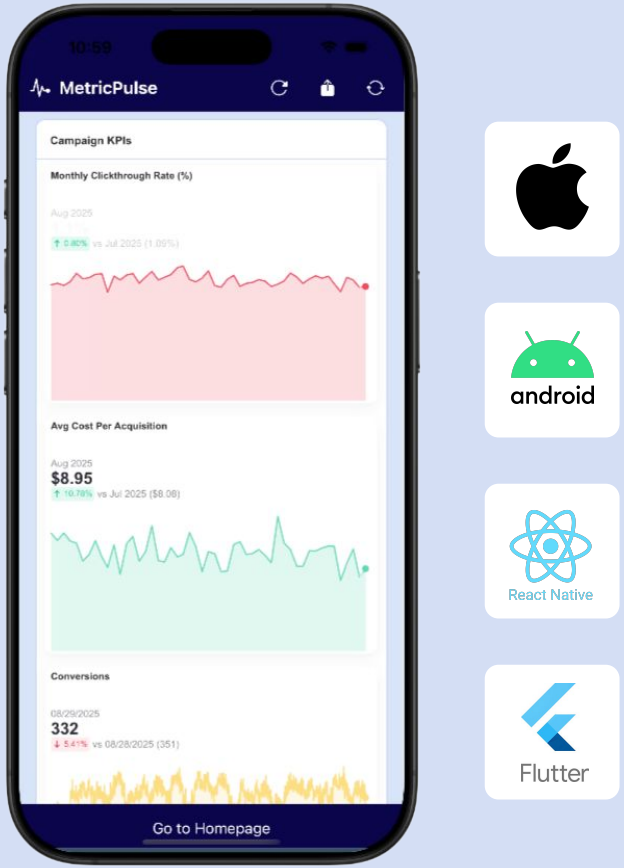
Sample mobile apps

Showing the art of the possible for mobile embeds with sample apps

- Liveboard embeds only
- “Just-enough” interactivity
- Responsive web experience

- Next: Embed Spotter in your Mobile app

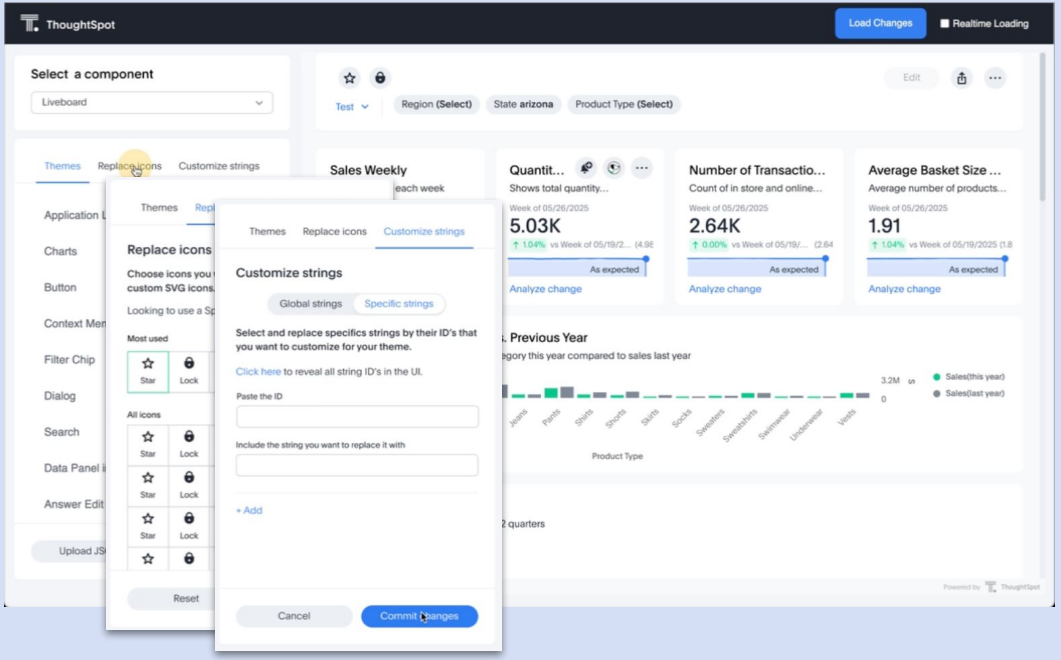


© 2024 ThoughtSpot, Inc.

Advanced styling and white-labelling options

Making it simple to tailor your analytics and match your brand

- New CSS theme builder for low code/no code styling
- New CSS variables covering more embeddable components
- Next up: AI Theme Builder on your cluster
- Long term: Access icon and string customizations from Theme Builder
- Advanced white-labelling for customer emails + Webhooks for full customizations and workflows



TS Cloud Q1 '26
Roadmap dates are subject to change

Actionable Analytics & Custom Workflows

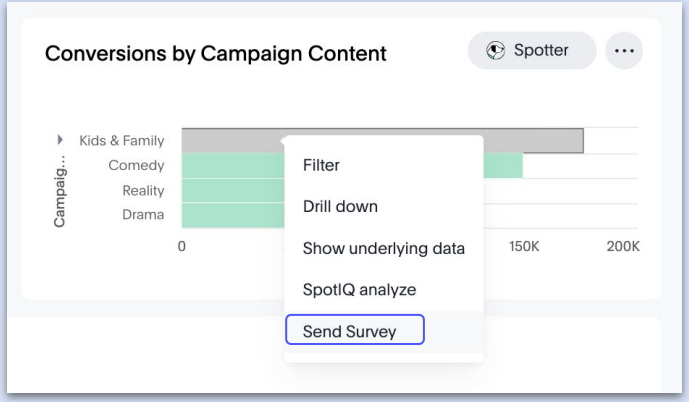
Automate & expand actions available to your users on your insights

Webhooks Platform

- Complete control on email white labeling
- Subscribe to large panel of events to help with CICD automation or audit

Code-based Custom Actions

- Custom actions entirely hosted in your application's code for easier CICD and more granular control on when to display them
- Liveboard-level custom actions



TS Cloud Q1-Q2 '26

Seamless CICD in ThoughtSpot

TML improvements

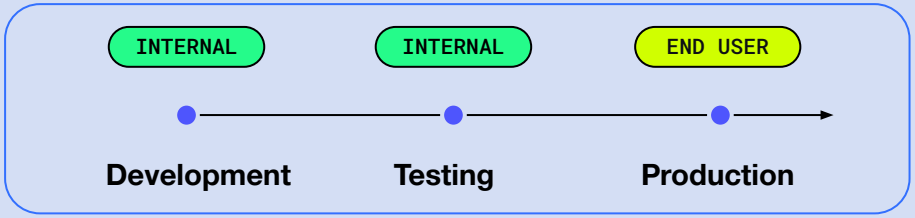
1. Customers can import TML in any org, **as is** (variables, object_id everywhere)
2. All objects are fully represented in TML
3. TML backwards compatibility

Process improvements

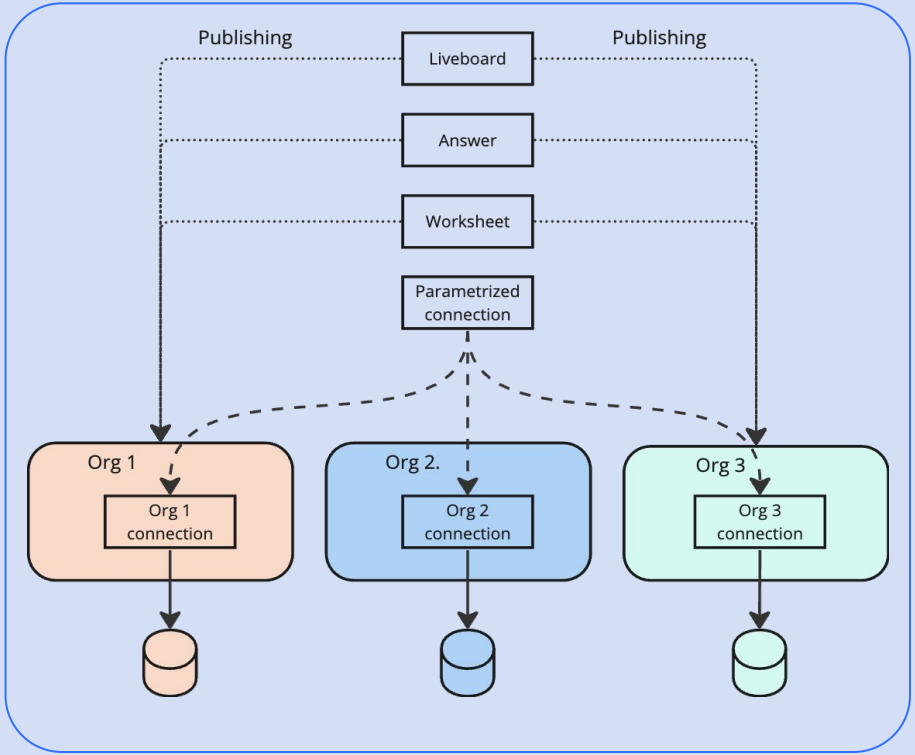
4. Publish, don't deploy (Publication GA)

VCS Support (Gitlab, Bitbucket, etc.)

5. SDK / wrappers on top of TML instead of vcs specific APIs: need to be able to connect to TS **FROM** the VCS platform (PAT)
6. Ultimately deprecate Git APIs in favor of SDKs



Git integrations



Publication
